

# INTRODUCTION

Does your organization or do you individually need engaging and relevant training for new or ongoing professional development and compliance? Sarros Environmental is introducing both in-class, mobile, and onsite training options across the spectrum of environmental regulation and project management.

Our new line of training topics offer required courses in the industry familiar to us all such as Hazardous Waste Operations and Emergency Response-HAZWOPER (initial 40-hr and 8-hr refreshers), DOT Hazardous Communication-HAZCOM, and Storm Water Pollution Prevention Plan-SWPPP training. We are also pleased to offer Lunch and Learns and Take Fives that are specific to your goals.

Sarros Environmental is also a teaching resource offering a wide variety of courses tailored to train graduating students and new employees to the environmental industry who need some coaching or an introduction to environmental "field method" basics to reduce the learning curve for new hires.
